

**How this activity/project relates to a biblical understanding of GOD**

God created plants in the beginning, and He ordained that humans should govern over them.

God shares His secrets with those who ask and wait on Him for answers, and thus He enables people to accomplish things beyond themselves, for His glory and honor.

**How this activity/project relates to a biblical view of CREATION**

All plantlife is continuously sustained by the Creator, and He holds the keys to their use.

God owns every plant.

**How this activity/project relates to HUMANITY**

Humans were made to govern over plants, as the crown of God's creation.

Through growing and managing plants, humans can fulfill their own God-intended design, and put their own giftedness to work in the world, for the benefit of others.

Through plant management and creation of plant-related jobs, the gifts and abilities of others can be put to good use.

**SPECIFIC ACTIVITY/PROJECT**

Creating new products from peanuts, soy beans and sweet potatoes to boost the economy and to help Southern farmers maintain jobs that benefit many.

Ruling over plants is one way to fulfill God's purpose for human beings, as governors over the material world.

Fulfilling Christ's command to love our neighbors as ourselves can be done through working with plants.

We have a responsibility to govern over plants in ways that are resourceful and beneficial, without waste or abuse.

We have a responsibility to look out for the economic well-being of others, which can be accomplished through providing jobs that further the common good. In this way, the problem of poverty can also be addressed in developing nations.
